

## NEW DESIGN

Hoving Holland is happy to inform you about our new design. Some changes in the organization have been made and a new construction hall has been build.

With this newsflash we would like to keep you informed about the latest developments and important events.

## RECENT INOVATIONS

### Walking floor hopper

The Walking floor hopper has been engineered together with a well-known supplier of walking floor systems. With a walking floor high capacities can be reached up to 450 tons/hour.

### Truck hopper

The machine is designed to be connected to a trailer which empties itself into the hopper. The combination of the hopper and the kick back drum realizes a constant flow of compost.

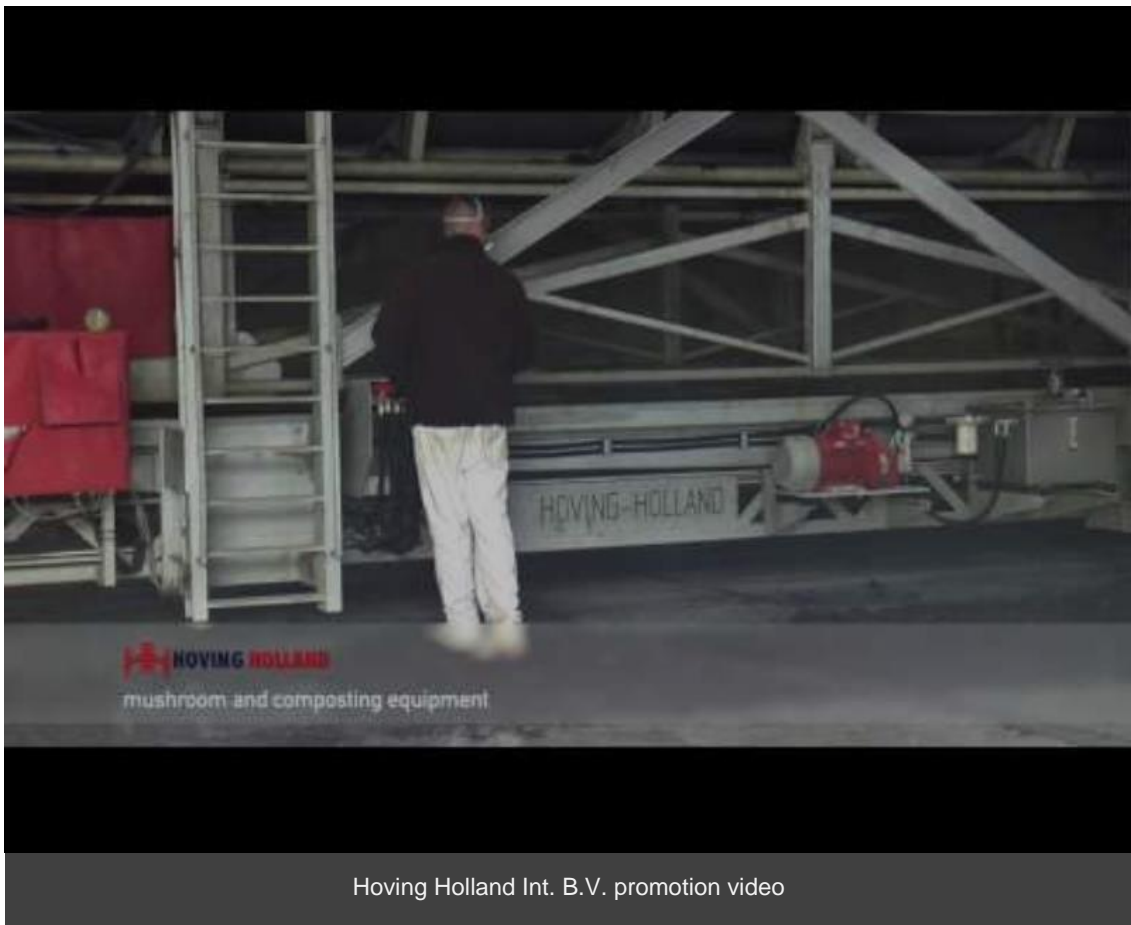

### Adjustable discharge conveyor

At the customer's request we engineered a new Tunnelwinch. This machine will have an adjustable discharge conveyor for optimal mobility.

## PROMOTION VIDEO

We have made a new promotion video, to show the rest of the world what we produce and what we stand for. Most common phase I,II & III machinery are shown in this video. Hoving Holland however adapts all machines to each specific project. So for each project in this area we can prepare and discuss a proposal which fits your business the best.

Bale dunking line

Phase I mixing line

Inclined conveyor + Top filling system

Bunkerfiller

Reducer elevator

Central conveyor

Spawning unit

Block press line

Head filling machine

Tunnel filling cassette

Truck loading winch

Truck hopper

Emptying winch + conveyor

**A SELECTION OF OUR PRODUCTS:**

- Bale dunking lines
- Mixing lines
- Conveyors + mixing spinner
- Reducer elevators
- Bunker fillers
- Discharge wagons
- Tunnel filling cassettes
- Tunnel winches
- Spanner supply units
- Tray filling lines
- Bag filling lines
- Block press lines
- Compost / casing soil mixers
- Truck hoppers
- Head filling machines
- Shelf emptying conveyors

Hoving Holland designs and produces custom built machines and entire installations for mushroom culture and waste management. The machinery is adapted to your operation procedures and is also adapted to the site where the production takes place.
